将 footer 的文章导航搬家到 header.tpl，这样就解决了顶部导航不能有文章按钮的问题

1. 将路径 /catalog/controller/common/下的

footer.php 内第 4 行下面的

```
$this->language->load('common/footer');

$this->data['text_information'] = $this->language->get('text_information');
$this->data['text_service'] = $this->language->get('text_service');
$this->data['text_extra'] = $this->language->get('text_extra');
$this->data['text_contact'] = $this->language->get('text_contact');
$this->data['text_return'] = $this->language->get('text_return');
$this->data['text_sitemap'] = $this->language->get('text_sitemap');
$this->data['text_manufacturer'] = $this->language->get('text_manufacturer');
$this->data['text_voucher'] = $this->language->get('text_voucher');
$this->data['text_affiliate'] = $this->language->get('text_affiliate');
$this->data['text_special'] = $this->language->get('text_special');
$this->data['text_account'] = $this->language->get('text_account');
$this->data['text_order'] = $this->language->get('text_order');
$this->data['text_wishlist'] = $this->language->get('text_wishlist');
$this->data['text_newsletter'] = $this->language->get('text_newsletter');
$this->data['text_home'] = $this->language->get('text_home');
$this->data['name'] = $this->config->get('config_name');

$this->load->model('catalog/information');

$this->data['informations'] = array();

foreach ($this->model_catalog_information->getInformations() as $result) {
    if ($result['bottom']) {
        $this->data['informations'][] = array(
            'title' => $result['title'],
            'href'  => $this->url->link('information/information', 'information_id=' . $result['information_id'])
        );
    }
}
```

拷贝到 /catalog/controller/common/header.php 内
下面语句的上面

```
$this->load->model('catalog/category');
```

2. 打开/catalog/view/theme/geccoshop/template/common/header.tpl
```
<ul class="nav">

    <?php foreach ($categories as $category) { ?>
```

```php
<li><a href="<?php echo $category['href']; ?>"><?php echo $category['name']; ?></a>
    <?php if ($category['children']) { ?>
    <div>
        <?php for ($i = 0; $i < count($category['children']);) { ?>
        <ul>
            <?php $j = $i + ceil(count($category['children']) / $category['column']); ?>
            <?php for (; $i < $j; $i++) { ?>
            <?php if (isset($category['children'][$i])) { ?>
            <li><a href="<?php echo $category['children'][$i]['href']; ?>"><?php echo $category['children'][$i]['name']; ?></a></li>
            <?php } ?>
            <?php } ?>
        </ul>
        <?php } ?>
    </div>
    <?php } ?>
</li>
<?php } ?>

<?php foreach ($informations as $information) { ?>
    <li><a href="<?php echo $information['href']; ?>"><?php echo $information['title']; ?></a></li>
    <?php } ?>
```

加入红色部分
